

Connecting to a Network Printer (Windows 10)

1. Right click on the Start Menu and choose **Run**

2. When the **Run** box pops up, enter the following: \\gemini3
Then press OK.

3. You will now see a list of all the printers in the district. Double click the one that you want and you will see a popup saying that it is connecting to the printer. Once it disappears, the printer should be available to print to. You can do the same for any other printers that you need.
